

Oxford Textbook of Old Age Psychiatry, Tom Dening, Alan Thomas, OUP Oxford, 2013, 0199644950, 9780199644957, 860 pages. Broad in scope and with global appeal The Oxford Textbook of Old Age Psychiatry, second edition is the definitive resource on old age psychiatry. It comprehensively provides the latest knowledge on the science and practice of treating later life mental disorders, focusing on the health and social issues that arise around ageing, dementia, co-morbidity, dependency, and the end of life in progressively ageing societies across the world. Published in previous incarnations as the much loved Psychiatry in the Elderly, this core resource for all old age psychiatrists, trainees, and other clinical professionals treating older people's mental health, has been fully revised, updated, and significantly expanded. Twelve months inclusive access to the online version, including the full text (which can be browsed by the contents list, index, or searched), links from references to external sources (via PubMed, ISI, and CrossRef), and the ability to download all figures and illustrations into PowerPoint ensures that it remains the leading text on old age psychiatry in the field. Maintaining the classic combination of comprehensive coverage, clear writing style, and the provision of authoritative and up-to-date information from earlier editions, this highly respected volume covers the underpinning basic science, both the neurobiological and social varieties, clinical practice, and specific disorders, as well as providing information on psychiatric services for older people, and medico-legal and ethical issues that often present hard challenges for those treating older patients. Taking a global approach by highlighting both the common burdens and the differences in management from country to country and with a much expanded cast of contributors providing a truly international perspective, The Oxford Textbook of Old Age Psychiatry, second edition includes information on all the latest improvements and changes in the field. New chapters are included to reflect the development of old age care; covering palliative care, the ethics of caring, and living and dying with dementia. Existing chapters have also been revised and updated throughout and additional information is included on brain stimulation therapies, memory clinics and services, and capacity, which now includes all mental capacity and decision making. Providing extensive coverage and written by experts the field, the second edition of the Oxford Textbook of Old Age Psychiatry is an essential resource; no old age psychiatrist, trainee, or anyone working in the field of mental health care for older people should be without a copy on their bookshelf..

The Oxford Textbook of Old Age Psychiatry is the new edition of the much loved textbook previously published as Psychiatry in the Elderly. It has established itself as the standard textbook in its field due to its unique combination of comprehensive coverage, clear writing and authoritative and up-to-date information. This new edition maintains these strengths, with chapters covering the basic sciences underpinning old age psychiatry, clinical practice, psychiatric services for older people, specific disorders and medico-legal and ethical issues. The text has been extensively updated, with several new chapters added reflecting developments in the speciality. These include chapters on: different psychotherapies, e.g. interpersonal therapy and cognitive behavioural therapy, and

electroconvulsive therapy; memory clinics and liaison old age psychiatry; mild cognitive impairment and sleep disorders; and chapters by patients reflecting their experiences of their illnesses. The textbook has expanded to include 73 contributors from 8 different countries covering the panoply of relevant expertise. The editorial team has also grown with Robin Jacoby and Catherine Oppenheimer now being joined by Tom Dening and Alan Thomas. The breadth of authoritative coverage will continue to make this book one which all old age psychiatrists and trainees will want to have on their bookshelves. Geriatricians and other health professionals working with older people will also find in this book a handy resource to assist them when dealing with psychiatric disorders in older people.

Many people, including doctors who should know better, still view old age psychiatry as a support service for people with three or four diseases for which little can be done. This book is an ideal answer, with a richness of content ranging from complex neurology and molecular biology to compassion for individual sufferers, their relatives and carers. Kalman Kafetz, Consultant Geriatrician, London. This book continues the high standards of its forerunners which have appeared in smart succession to keep up with a changing field. There is no other textbook that sits at this level between the MRCPsych level (eg 'Practical Old Age Psychiatry') and the massive tomes on single issues (eg Burns on dementia)...Overall, the book is excellent and the chapters are generally of high quality. 2008 BMA Medical Book Awards This is a first-rate edition of this textbook...highly recommended.
