

The Management of Commercial Computing, Andreas Sofroniou, Lulu.com, 1996, 0952795604, 9780952795605, . .

Automating Systems Development , David R. Benyon, Steve Skidmore, 1988, Science, 504 pages. .

The CASE environment guide , Simon Holloway, 1993, Business & Economics, 395 pages. .

Fourth-generation systems their scope, applications and methods of evaluation, Simon Holloway, 1990, Computers, 374 pages. .

Systems Analysis And Design , Donald Yeates, Tony Wakefield, 2004, Computers, 499 pages. The book is directly relevant for students on HND, degree and professional courses. This market-leading text covers the whole range of activities necessary for the analysis

Rapid Growth Expected in Computer-related Jobs, New Occupational Outlook Handbook Reports , , 1986, Computer service industry, 1 pages. .

Speedball , Andreas Sofroniou, 2008, Fiction, 304 pages. In the dazzling blue waters of the Mediterranean paradise, the island of Cyprus, close to its coast lays Adelphi Isle. Tourists dare not visit this palm-fringed exotic place

The Philosophical Concepts of Management Through the Ages , Andreas Sofroniou, 2005, Management, 141 pages. .

The Simplified Procedures For I.T. Projects Development , Andreas Sofroniou, 2002, Internet, 34 pages. .

Computing Decisions , , 1986, , . .

The Towering Misfeasance , Andreas Sofroniou, May 1, 2006, Fiction, 340 pages. In 1974, a conflict broke out that was to elevate the Mediterranean and the Asia Minor world in sunder. The Turkish invasion of Cyprus lasted a few days, until the

A Town Called Morphou , Andreas Sofroniou, Jan 1, 1997, , 75 pages. .

Moral Philosophy, from Hippocrates to the 21st Aeon , Andreas Sofroniou, 2007, Philosophy, 368 pages. This book covers Moral Philosophy from the ancient times to the modern concepts of professional Ethics. Its all-embracing practical nature links it with many other areas of

The Management of Projects, Systems, Internet and Risks , Andreas Sofroniou, 2002, Internet, 91 pages. .

There can be little doubt that information systems and computing in general will become increasingly important in the years ahead. This book is, therefore, aiming to fill a gap in the current business management and the tutorial literature relating to computing management, including Information Technology as a unique subject. The book has been designed for the business person, for the student and the computer professional who needs a detailed overview of Information Technology and the systems involved. Further on, the book explores the fundamental aspects of operational computing, the development of new information systems, the choice of packages and the structured methodologies used. In writing the book, the author is mostly concerned with the development and the managing of systems and people in multi-national corporations, software houses, government departments, the European Union Commissions, and academia.

Of all the major problems encountered in computing, the most difficult is the management of the systems and their development. Unlike any engineering or architectural drawings, the systems cannot be visibly represented as a model. Any building or machine can be shown as a set of drawings and as a three dimensional model, but the design and the build of the system cannot be seen, nor can it be represented on top of a desk. In the case of an architectural concept, the designer will draw the plans and will supervise and delegate the tasks to builders to construct in a fashion, as close to perfect logistics as possible. In modern computing, structured methodologies are used, where dataflow diagrams can be drawn, data can be modelled and at the end of the logical phase, the system can be prototyped and programmed.
